Build foundations for realizing sustainable business management (Existing Business)

Domestic Business Strategy

Respond to the market changes flexibly and promote solution proposals

- Realization of next generation branch style, expansion of "non-cash" business sector -

[Financial]

- Expand sales of products that realize next generation branch style
- Expand main financial product sales

Key
measures

[Retail]

- Expand sales of products for self check-out such as Coin and banknote recyclers for cashiers & Ticket vending machines
- Expand "non-cash" business sector
(electronic settlement, voucher processing, biometric authentication)

Overseas Business Strategy

Further growth of financial market by expanding business of self-operation machines and acceleration of retail business

[Europe/ Americas]

- (Financial) Wider use of banknote recycler for tellers & cultivation of "Self" market
- (Retail)
 - Reinforce sales to back-office market and penetrate to front market
 - Create synergies with acquired companies

Key
measures

[Asia]

- (Financial) Expand sales of banknote recycler for tellers in main countries
- (Retail) Investment in potentially high-growth countries

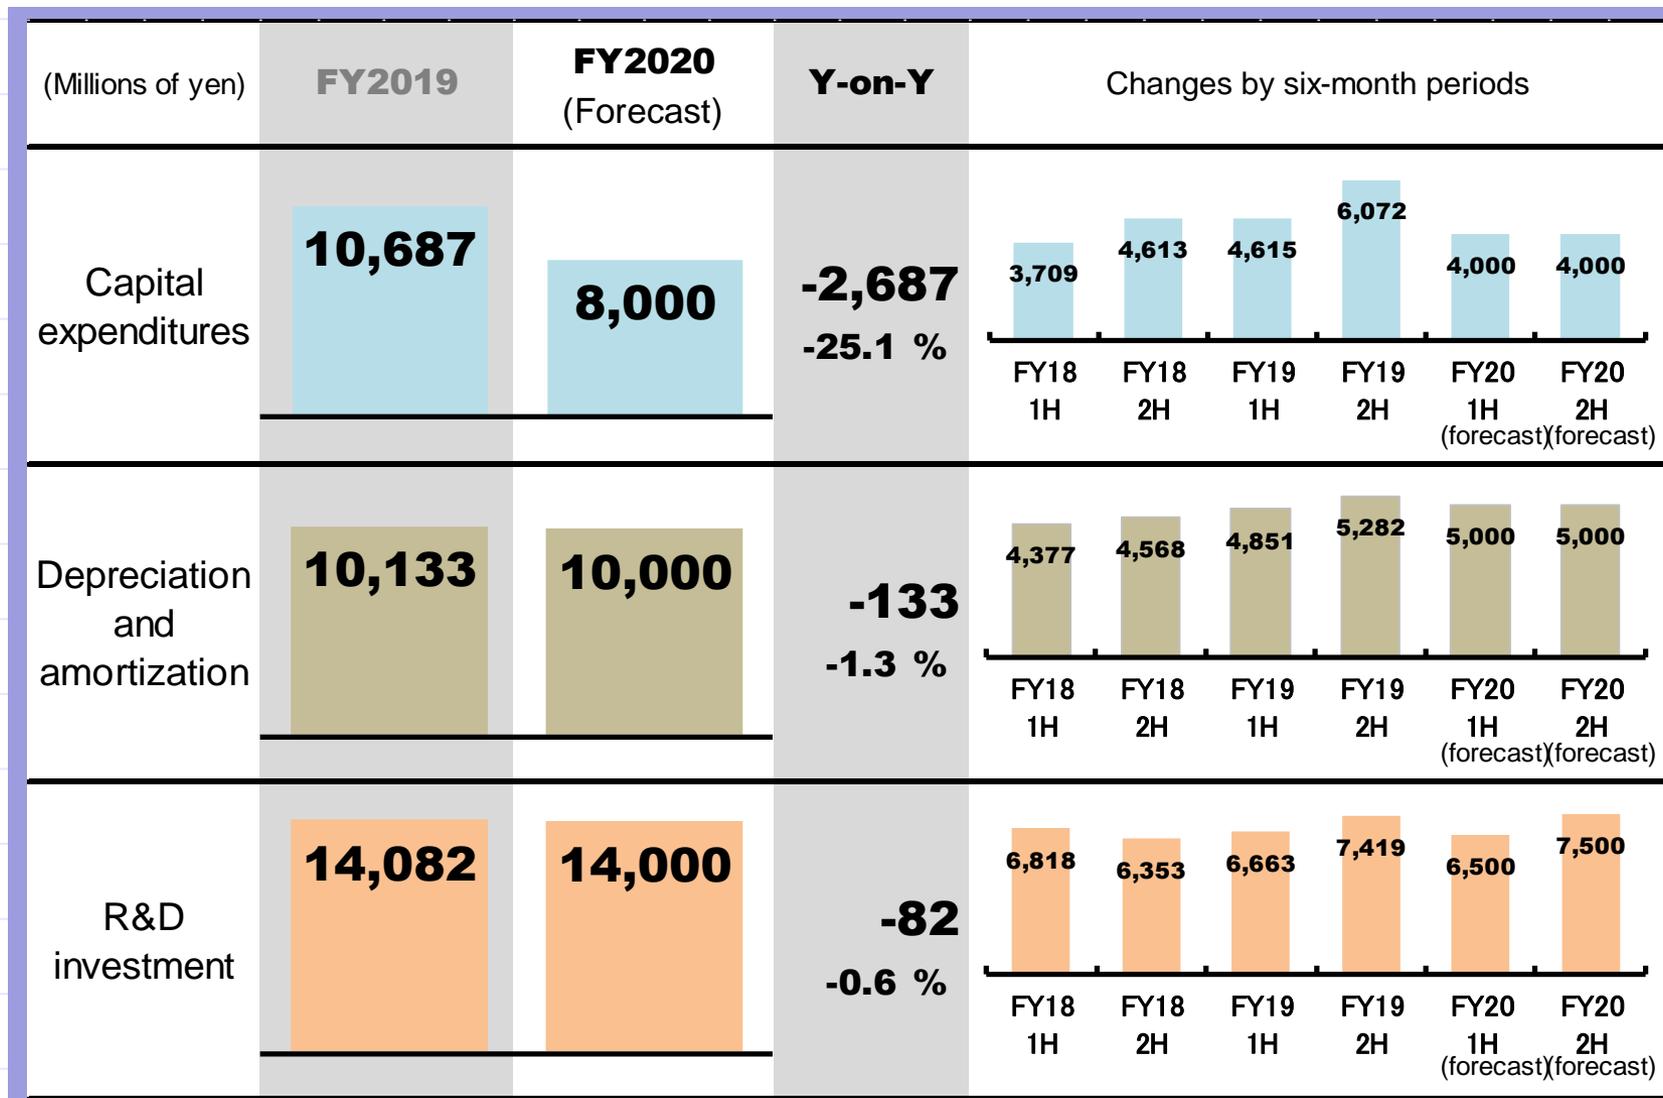

Strengthen collaboration with various partners to solve social issues (New Business)

- Shift the business model from products (hardware) to solutions & services
- Further growth of the biometric/image recognition business & robot system integration

3) Building new business models in Japan (Approx. ¥3.5 billion)

Positioning of new business investment	BIC Business Innovation Center	<ul style="list-style-type: none"> •Creating added value for existing business (Short & Medium Term) •Creating a new business model (Medium & Long Term)
	Robot system integration	<ul style="list-style-type: none"> •Promotion of automation (Short & Medium Term)

GLORY

The "Glory Medical Engineering Collaborative Research Project" has been established as part of the Advanced Medical Engineering Research Center (AMEC), University of Hyogo. By utilizing Glory's recognition and identification technologies, the aim is to develop technologies that will be useful for early detection, diagnosis, and treatment of various diseases associated with an aging society.

順天堂大学
JUNTENDO UNIVERSITY

GLORY

Collaborative research is being conducted with Juntendo University and several other companies. By using Glory's facial expression recognition technology, IBM Japan's AI, and other technologies, the aim is to establish a system that can detect Parkinson's disease and dementia, at an early stage and diagnose their progression based on facial expressions and speech.

EcoNaviSta

GLORY

エコナビスタ株式会社

Collaborate on health monitoring services for care and welfare facilities. Glory's facial-recognition-driven System When a hospitalized patient tries to leave the hospital, the facial-recognition camera installed will detect them and send a message to hospital staff computers and tablets together with images taken.

株式会社 EMシステムズ

GLORY

Collaborated with EM Systems on a prescription input support system for health insurance pharmacies. Glory's optical character recognition (OCR) technology has been installed into a system provided by EM Systems that manages patient information. Available from October 2019.

Providing solutions for realizing a safe and secure society

Development of walk-through facial recognition system

【Outline】

- Enable Customers to make payments by biometric identification using their facial images registered on the system.
- Using facial images linked with credit card and bank account information.

Joint shoplifting prevention project at book stores in Shibuya

Glory's facial recognition system is used in the first project in the industry joined by three bookstores in Shibuya-ku, Tokyo to detect shoplifters by sharing face images.

The project helps to prevent repeat offenses and reduce damage to bookstores, providing customers with a safe and secure store environment.

Development of license plate image clarification technology

Developed the industry's first technology that can read characters with high accuracy even when the license plate image is unclear.

With this technology, the rate of correct reading of license number from the video/image is improved by 20%, and it supports the strengthening of crime prevention.

Commercialized "BioPay" (Biometric payment)

【Features】

- Accurate personal identification is possible even in severe environments, such as wearing a mask or sunglasses, backlit or dark place, and a three-quarter face on pre-registered data.

- Can manage face images for up to 1000 stores.

Included in ESG Investment Indexes

Glory has been Included in FTSE4Good Index Series and FTSE Blossom Japan Index which are leading indexes of ESG investment.

June 29, 2020

Launched Mobile Seal Stamp Scanner

The product reads the seal imprint directly from the seal stamp and enable wireless communication. In addition, the product size is about 50% thinner compared to the conventional model.

Sales staff can perform paperless transaction by using the product with tablet terminal.

<Notes>

1. The forward-looking statements such as operational forecasts contained in this document are based on the information currently available to the company and certain assumptions which the company regards as legitimate, and are not promises regarding the achievement of forecasts. Actual performance may differ greatly from these forecasts due to various present and future factors.

The factors includes changes in the economic conditions in the company's principal markets, changes in demand for the company's products, fluctuations of exchange rates, and impacts of changes in various regulations, accounting principles and practices.

Please also take note that forecasts in this document may change without prior notice unless required by laws.

2. Amounts are rounded down to the nearest million yen for calculating percentages of year-on-year changes and composition ratios.
