Nitto announces Phase I clinical trial of NBF-006 for the treatment of KRAS driven tumors in advanced cancer patients is allowed to proceed by the FDA

Nitto announced that the investigational new drug (IND) application for NBF-006, a ribonucleic acid interference (RNAi)-based treatment for KRAS mutant tumors was allowed to proceed by the US Food and Drug Administration (FDA).

NBF-006 is a novel lyophilized lipid nanoparticle (LNP) formulation which delivers encapsulated small interfering ribonucleic acid (siRNA) active pharmaceutical ingredient designed to inhibit the expression of glutathione-S-transferase P (GST- π) to tumors. GST- π is strongly up-regulated in many cancer types, specifically KRAS-mutant lung, colorectal, and pancreatic cancers and a known regulator of oncogenic pathways. NBF-006 demonstrated significant tumor inhibition in KRAS-mutant non-small cell lung cancer animal models.

Nitto BioPharma, Inc. (Headquarters: San Diego, California) is working promptly to initiate the Phase 1 study.

* From the fiscal year 2018, we have changed the attribution of a group company internally in "Industrial Tape", and the change has also been reflected in the figures for the fiscal year 2017.

In our "Summary of Consolidated Financial Statements", from the third quarter ended December 31, 2018, "royalty income", which was previously included in "other income" on the consolidated statements of income, is included in "revenue". Figures for the fiscal year 2017, have been restated to reflect this change.
